# Your Chief of Staff.
Air-Gapped.

The Sovereign Executive
(OpenClaw Office Edition).

NotebookLM

Stop renting your productivity to surveillance engines.

Big Tech Assistants

Ad Profiling

Sovereign AI

- Standard AI assistants (Copilot, Gemini, Siri) are not employees; they are spies.
- Every scheduled meeting, dictated client note, and scanned invoice is mined to build a profile of your business.
- True privacy requires infrastructure you own.

NotebookLM

An autonomous employee that lives entirely on your metal.

100% Local Processing: Runs as a Dockerized container on your Sovereign Sentry or Nomad Link.
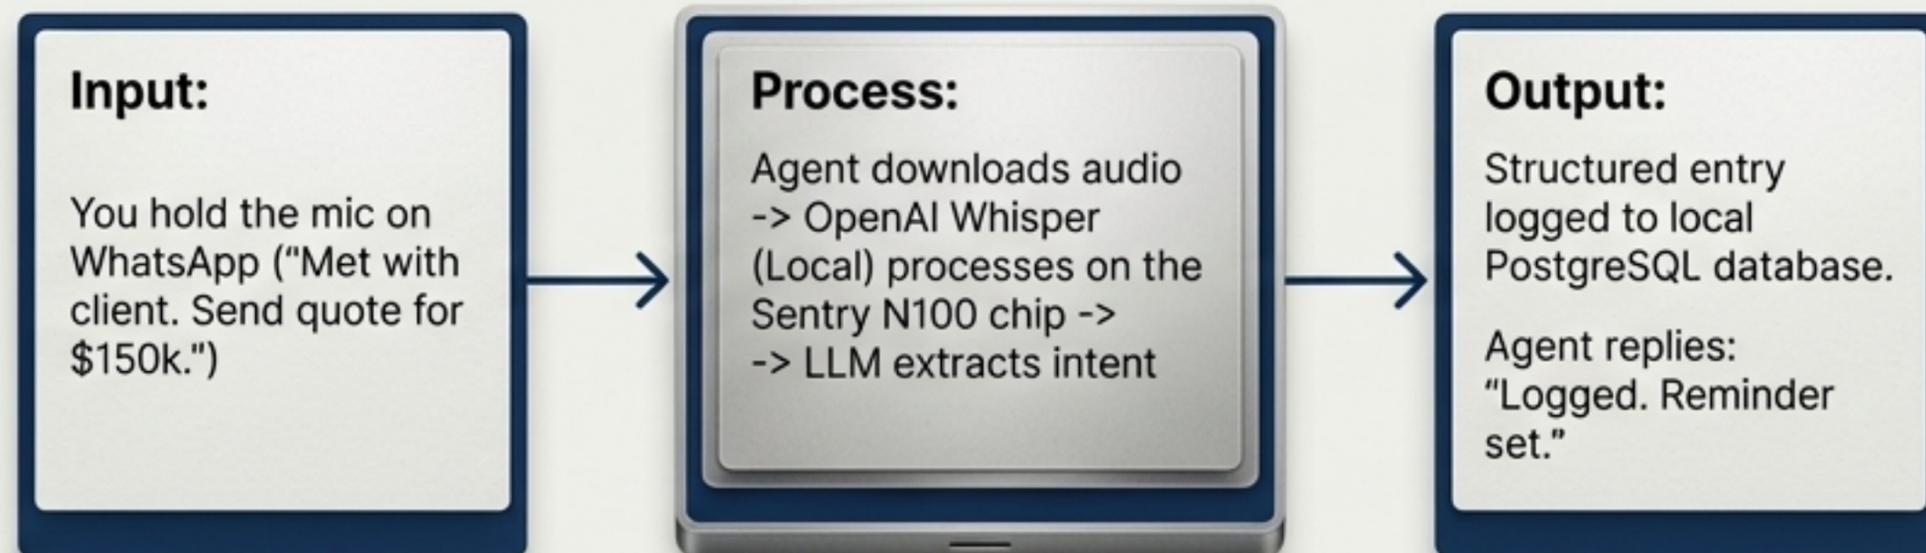

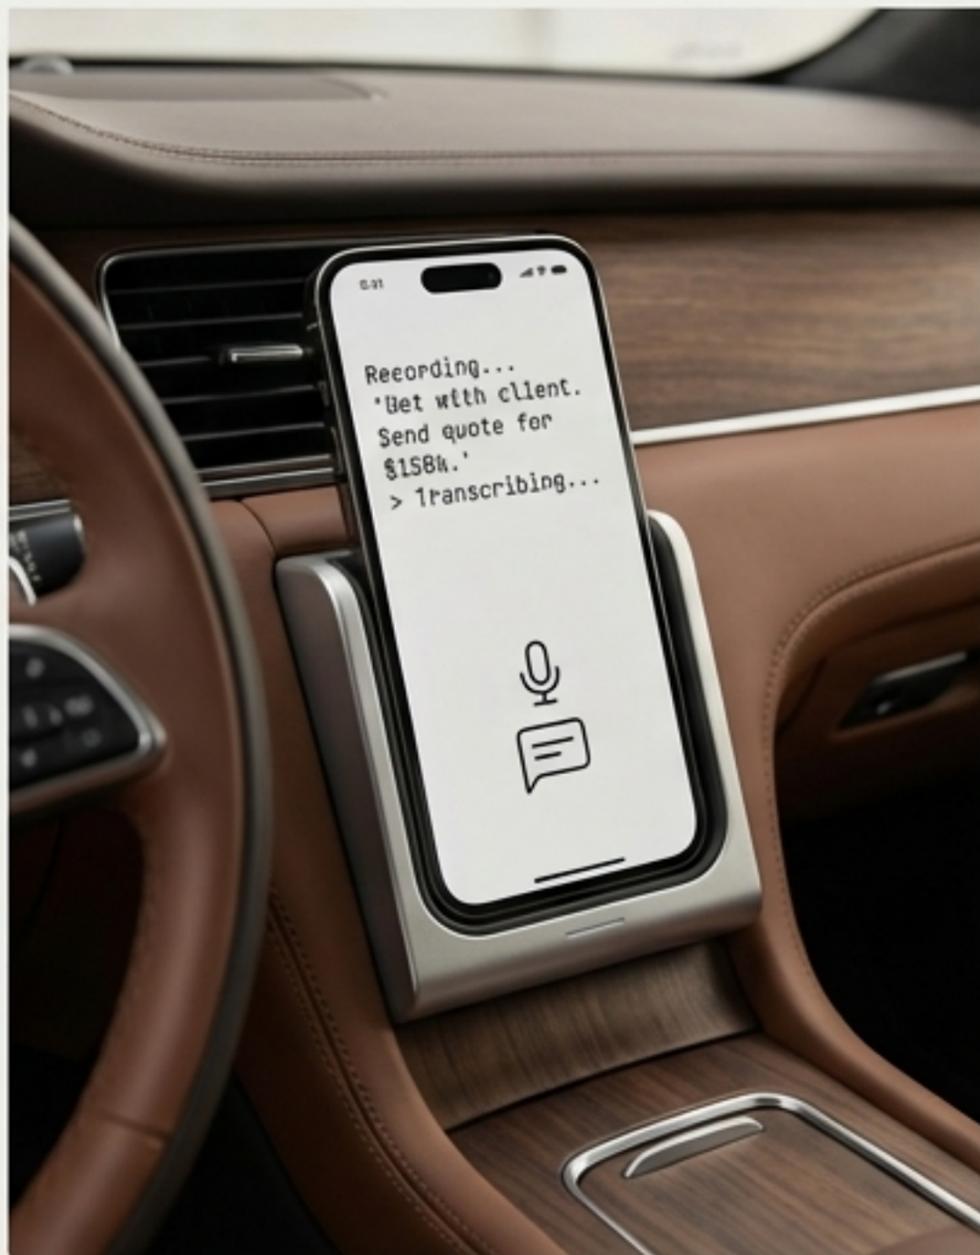

100% Local Processing: Runs as a Dockerized container on your Sovereign Sentry or Nomad Link.

Frictionless Interface: Connects via secure chat (Signal, Telegram, WhatsApp).

Human-like Execution, Silicon Speed: Accepts natural commands and executes them without a single packet leaving your network.

ZERO EXFILTRATION

The Scribe: Voice-to-CRM transcription on the move.

Recording...
'Met with client.
Send quote for
$150k.'
> Transcribing...

Input:

You hold the mic on WhatsApp ("Met with client. Send quote for $150k.")

Process:

Agent downloads audio -> OpenAI Whisper (Local) processes on the Sentry N100 chip -> -> LLM extracts intent

Output:

Structured entry logged to local PostgreSQL database.

Agent replies: "Logged. Reminder set."

The Archivist: Turning chaotic paperwork into sorted data.

- Set up a secure 'Watch Folder' on your local network.

- Drop raw scanned PDFs or images into the directory.

- The agent wakes up, utilizes Tesseract OCR to extract vendors, dates, and totals.

- Files are automatically renamed (e.g., 2026-03-04_HomeDepot_450.pdf) and routed to the correct tax archive.

The Gatekeeper: Calendar logic and time negotiation.

- Command your agent: 'Find time for a call with Bob on Tuesday.''

- The Gatekeeper reads your local .ics calendar files synced via CalDAV.

- Generates a secure, self-hosted booking link (or text list of slots).

- Automatically blocks your calendar upon selection—no external booking software required.

Built for highly protective professionals.

The 'Sovereign' Realtor

Action: Voice-notes the agent via Signal after a property showing.

Result: CRM is updated and follow-up email drafts are generated before returning to the office.

The Farm Manager

Action: Snaps photos of feed invoices and sends them via WhatsApp.

Result: Expenses logged in the ledger, images archived, paper discarded.
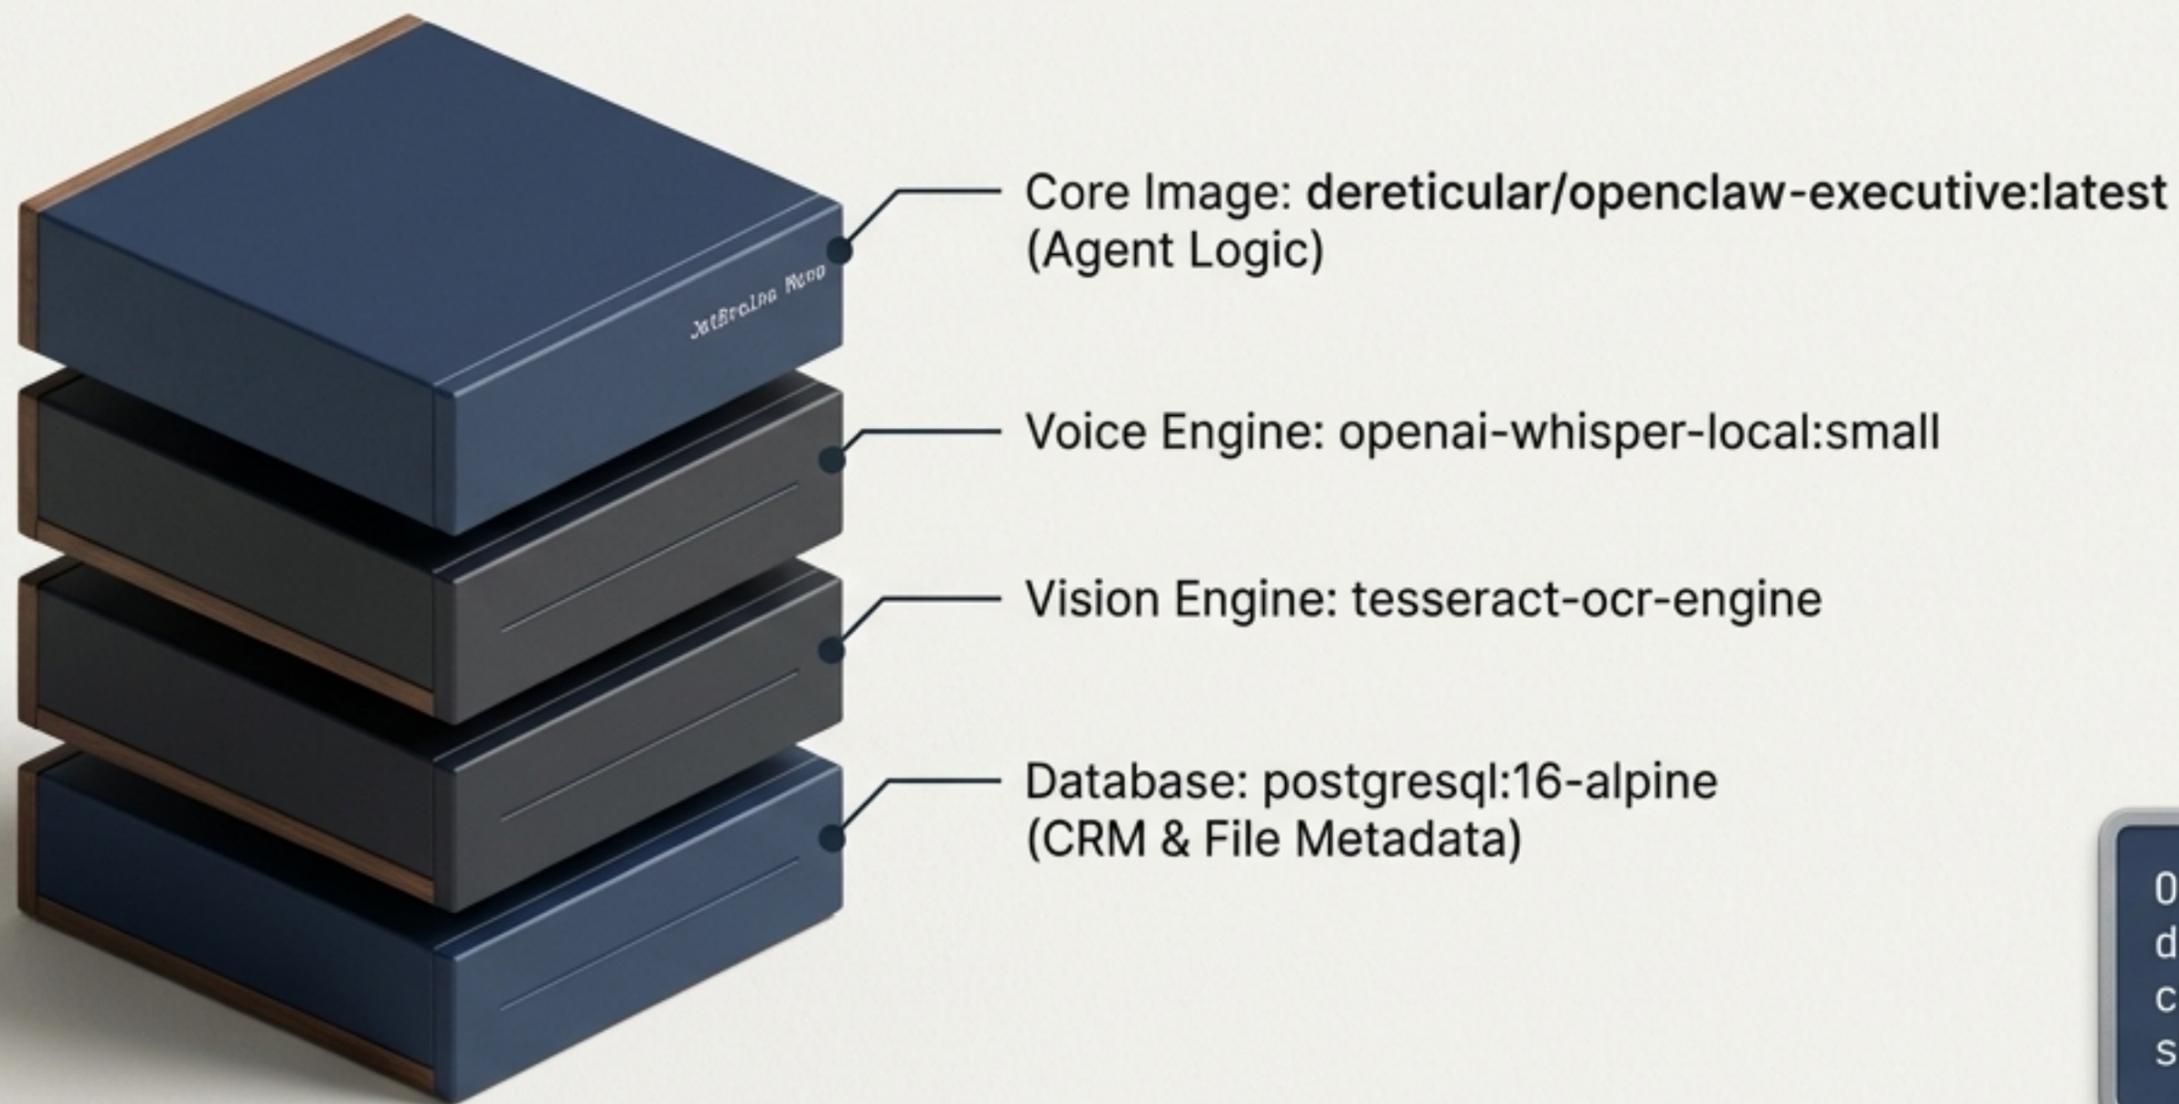

The Private Consultant

Action: Feeds NDA meeting transcripts to the Sovereign Executive.

Result: Action items summarized via local LLM without exposing client data to external servers.

The Bill of Materials: Open-source power, tightly orchestrated.

```
Orchestrated locally via
docker-compose.yml using
custom Python and Node.js
skill scripts.
```

NotebookLM

Hardware constraints and technical specifications.

Minimum Hardware	Sovereign Sentry (Standard/Pro) or Raspberry Pi 5 (8GB). (JetBrains Mono)
Storage	10GB System + User Data (Fast NVMe required for efficient OCR). (JetBrains Mono)
Network	Filtered outbound access for Telegram/Signal APIs. Zero inbound ports required (uses Polling). (JetBrains Mono)
Input Formats	.ogg, .mp3, .wav, .pdf, .jpg. (JetBrains Mono)

Critical Warning: Do not install on 4GB Raspberry Pis. The local Whisper AI footprint will cause memory thrashing and system failure.

Risk mitigation for the air-gapped environment.

Cloud Leaks (R-PRIV-01)

Risk: Users connecting Google Calendar, leaking metadata.

Mitigation: The setup wizard enforces a privacy warning, officially recommending Nextcloud CalDAV to maintain the air-gap.

OCR Bottleneck (R-PERF-01)

Risk: Dumping 10,000 scanned pages simultaneously freezing the host machine.

Mitigation: The Archivist queue logic processes files sequentially with a high nice value (low CPU priority), keeping your Sentry responsive.

Deployment: Four phases from purchase to autonomy

Step 1: Entitlement

Backend generates a SHA-256 License Key and whitelists your Sovereign ID for registry access.
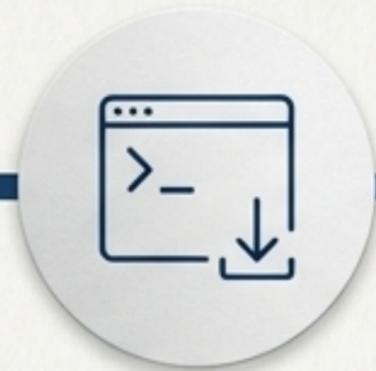

Step 2: Delivery

You receive the Activation Email, Setup Wizard link, and Discord QR code.

Step 3: Installation

SSH into your Sentry. Execute the `curl` bash script, input your BotFather Token and CalDAV URL.

Step 4: The Handshake

Send /start via Telegram/Signal. The Executive replies: "Online. Database initialized. Ready for dictation."

NotebookLM

You buy the code.
You own the code.

Price: $199.00

License Type: One-Time
Perpetual License.

SKU: SOV-AUTO-EXEC

- No SaaS Subscriptions: Break free from the monthly fees of Big Tech AI.

- Delivery: Instant Digital Download.

NotebookLM

Ongoing support and white-glove deployment.

Software Updates

1-Year private repository access for security patches and new skill modules pushed via Docker Watchtower.

White-Glove Setup (+$150)

Optional add-on. Our engineers remotely configure your entire stack via your Sovereign Key.
Optional add-on. Our engineers remotely configure your entire stack via your Sovereign Key.

Your complete deployment package.

✓ **Registry Access Key:** Unique credential to pull the dereticular/sovereign-exec Docker images.

✓ **Configuration Guide:** Comprehensive PDF detailing Telegram/Signal Bot generation and CalDAV integration.

✓ **The Skill Pack:** Pre-written, optimized scripts for OCR parsing, Voice-to-Text intent mapping, and local CRM logging.

✓ **Re-Config Tool:** Built-in ./reconfig_bot.sh script to easily swap bot tokens without rebuilding the stack.
